

Razorpay Embedded Finance x Urban Company Providers

Executive AI Report

Generated: 2026-05-24 07:38 | Data coverage: 2026-05

Metric	Value
Providers	1,000
High Risk Share	11.1%
Retention Rate	80.4%
Average Growth	-25.4%
Survey Respondents	30

Executive Summary

- High-risk providers represent 11.1% of scored provider-month records, with average default probability at 41.1%.
- Provider growth remains positive at an average -25.4%, supported by a retention rate of 80.4%.
- Primary research shows 100.0% of respondents report strong settlement-delay pain, while 86.7% report a need for business credit.
- The default model is the strongest production risk signal with ROC AUC 0.71; other models should be interpreted as decision support, not automated decisions.

Risk

- High risk share: 11.1%
- Medium risk share: 59.2%
- Average default probability: 41.1%
- Observed synthetic default rate: 0.6%
- Recommended action: prioritize working-capital support and settlement monitoring for high-risk providers.

Growth

- Average income growth: -25.4%
- Average monthly profit: Rs 14,612
- Average technology adoption score: 0.79
- Interpretation: digital adoption and embedded finance should be treated as operational enablers of provider advancement.

Retention

- Retention rate: 80.4%
- Interpretation: retention should be read together with payout speed, repeat-customer behavior, and credit access.

Model Metrics

- Default model ROC AUC: 0.71
- Churn model ROC AUC: 0.97
- Adoption model ROC AUC: 0.61

- Income growth model R2: 0.82
- Governance note: use leakage-safe t+1 features and monitor class imbalance before operational deployment.

Primary Findings

- Survey respondents: 30
- Digital adoption score: 0.64
- Strong settlement-delay pain: 100.0%
- Need business credit: 86.7%
- AI tool usage: 60.0%
- Dissertation use: primary responses validate the direction of settlement, credit, and digital-readiness assumptions.

Conclusion

The combined synthetic operational data, leakage-safe ML outputs, and primary survey evidence support a dissertation narrative in which embedded finance improves provider liquidity, but risk governance and settlement transparency remain central to responsible deployment.
